The above discussion is provided for general information. For more specific information concerning water rights, please contact an attorney or write to this office.

We have several pamphlets available. They include: (1) Statements of Water Division and Use, (2) Information Pertaining to Water Rights in California, and (3) Appropriate in California.

Statement of Water Division and Use must be filed by riparian and pre-1914 appropriative water users as set forth in Water Code section 510 with specific exceptions. The filing of a statement (1) provides a record of water use, (2) enables the State to notify such users if someone proposes a new appropriation, and (3) assists the State to determine if additional water is available for future appropriations.

There is a surplus of water rights not needed by riparian water users. Since 1914, new appropriators have been required to obtain a permit and license from the State. An appropriate right is required for use of water on non-riparian land and for storage of water. Generally, appropriate rights may be exercised only when there is a surplus "foreign" to the natural stream system.

A riparian right enables an owner of land bordering a natural lake or stream to take and use water on his riparian land. Riparianland must be in the same watershed as the water source and must never have been served from the sources of supply by an intervening parcel without reservation of the riparian right to flows from a stream but may not be used to store water for later use or to divert water which originates in a different watershed, water previously stored by others, return of a stream, or other "foreign" water to the natural stream system.

Generally, a riparian user must share the water supply with other riparian users. Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or to divert water which originates in a different watershed, water previously stored by others, return of a stream, or other "foreign" water to the natural stream system.

## GENERAL INFORMATION PERTAINING TO WATER RIGHTS IN CALIFORNIA

There are two principal types of surface water rights in California. They are riparian and appropriative rights.

A riparian right enables an owner of land bordering a natural lake or stream to take

and use water on his riparian land. Riparian land must be in the same watershed as

the water source and must never have been severed from the source of supply by an

intervening parcel without reservation of the riparian right to the severed parcel.

Generally, a riparian user must share the water supply with other riparian users.

Riparian rights may be used to divert the natural flow of a stream but may not be

used to store water for later use or to divert water which originates in a different water-

shed, or return flows from use of groundwater.

An appropriative right is required for use of water on nonriparian land and for storage

of water. Generally, appropriative rights may be exercised only when there is a surplus

use, (2) enables the State to notify such users if someone proposes a new appropriation

use, (3) assists the State to determine if additional upstream diversion from their diversion

is available for future appropriators.

The above discussion is provided for general information. For more specific informa-

tion concerning water rights, please contact an attorney or write to this office. We have

several pamphlets available. They include:
